

Syngrafii LongPen Printer™

Syngrafii Delivers You More Revenue with Increased Customer Growth

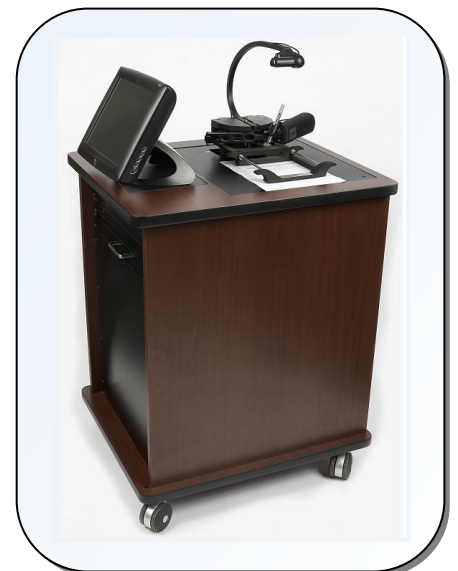

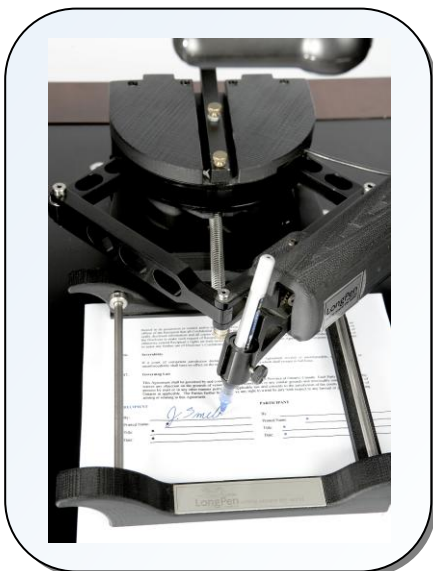

We enable 2 or more parties to complete transactions from anywhere worldwide, removing the delays & barriers associated with in-person paper based transactions.

Market Differentiator: We are the only eSignature solution worldwide that enables users to execute an original one-time use signature onto paper, a digital document or a hybrid process while supporting an organization's security, compliance and workflow requirements.

Syngrafii LongPen Printer™ – Signature Execution onto an Original Document

The Syngrafii LongPen Printer™ is a hardware product that executes your one-time-use signature onto hard copy documents. When engaged in a live signing session, a remote agent places a hard copy document on the LongPen Printer™ where a document camera presents a live image of the document to the user. The user reviews the document through our signature capture software and executes their signature through this software. The LongPen Printer™ then executes the same speed, cadence and pressure of the signature onto a hard copy document. This document is now an original document that can be reviewed by forensic analysts and confirmed for identity and originality of the transaction.

Syngrafii's LongPen Printer™ with Syngrafii's Signature Capture Software, Digital Paper™ and MasterFile™ non-repudiation software provide signature execution onto hard copy documents and/or digital documents anytime, from anywhere.

Specifications

Syngrafii LongPen Printer™
